# SERIES 7000

Infiltration & Inflow Moniter System

- The most economical system in the industry
- Battery Operated
- Portable-move from manhole to manhole.
- Logs up to eight weeks of data
- Five minute sample intervals. 24 hours a day.
- Data logged for daily readings and rainfall input.
- Permanent data retention.
- Operates with Windows 95, 98 or newer.

The **SERIES 7000 MONITOR** is an ultrasonic level-measuring device designed to monitor infiltration and inflow in low flow sewage manholes. This is a great product for new residential housing developments before dedication to the municipality. Why accept a system with problems?

Model 7000 Unit

1 - Software Package
